

INDUSTRIAL DEHUMIDIFIERS

OS-150

OS-300

OS-500

Olmas industrial dehumidifiers, including the **OS-150, OS-180, OS-300, and OS-500 series**, offer an ideal solution for humidity and condensation control in medium-sized production environments with temperatures ranging from **15°C to 40°C**, all without the need for additional equipment.

These units are widely applied in: Storage warehouses, Food and pharmaceutical factories, Precision mechanical workshops, Museums and exhibition halls, Media centers.

Key Components

Hydrophilic E-coated evaporator coil

40% faster and more efficient dehumidification

High-performance compressor

Features internal circuit breaker and high/low pressure protection

Airtight centrifugal fan

Smooth, quiet, high-performance operation

Humidity control panel

Automatic and energy-saving operation

Operating principle of condensing dehumidifier

- First, the centrifugal fan draws humid air into the unit. At the evaporator coil, the air is cooled below its dew point, causing moisture to condense and drain away. The now-cooled air then passes through the condenser coil to be reheated. Finally, the warm, dry air exits, enters the target area, and continues the dehumidification cycle.
- For enhanced efficiency and durability, integrate the following: a pre-filter before the evaporator to clean the air and prevent clogging; a defrost function to remove frost buildup on the coil in low temperatures; and an automatic humidity controller to self-regulate the dehumidifier and maintain the desired humidity.

* For dehumidifiers with a capacity of less than 150L/day, the duct must be less than 3m. For dehumidifiers with a capacity of over 150L/day, the duct must be less than 5m.

* Industrial dehumidifiers operating in an environment between 15-18°C must be equipped with an additional defroster for the dehumidifier to work properly.

* Noise level measured at a distance of 3m
